

We Make Applications Stronger

Are You Prepared for a Big Change in Your Network?

A significant paradigm shift is taking place in networks going beyond the typical distinctions between control plane and data plane, where the distinctions between physical and virtual data carriers are increasingly blurred, and software applications are introduced in place of hardware silos to manage dataflow. This means network testing and providing visibility to verify interoperability, performance and reliability of these new network functions have become ever more critical. Ixia offers a complete set of test and visibility solutions for both physical and virtualized infrastructure to help you overcome these new challenges.

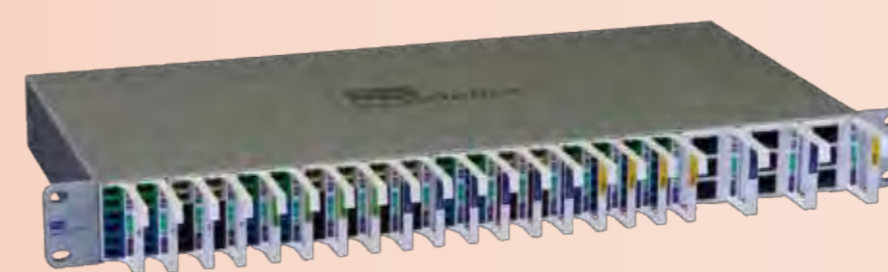

Transport Network

100GbE/400GbE Test Solution

NetOptics FLEX-TAP

Visibility to 100GbE Infrastructure

IXIA 400GbE Jumpstart Test System

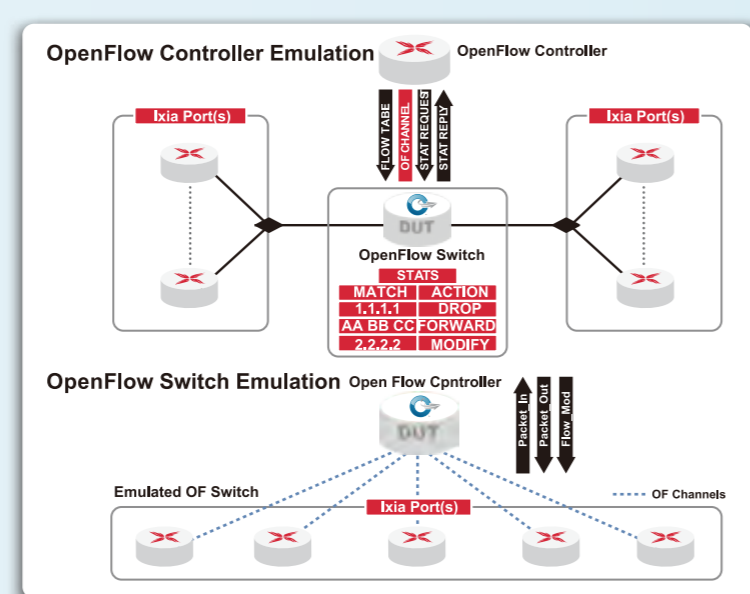

Visibility solution

Vision ONE

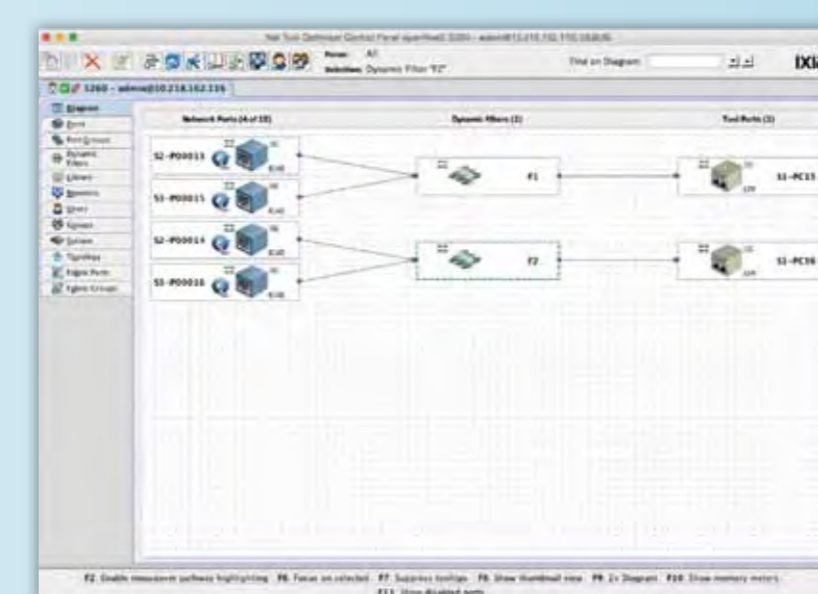

SDN: Software Defined Network

OpenFlow Test Solution

OpenFlow Test Solution

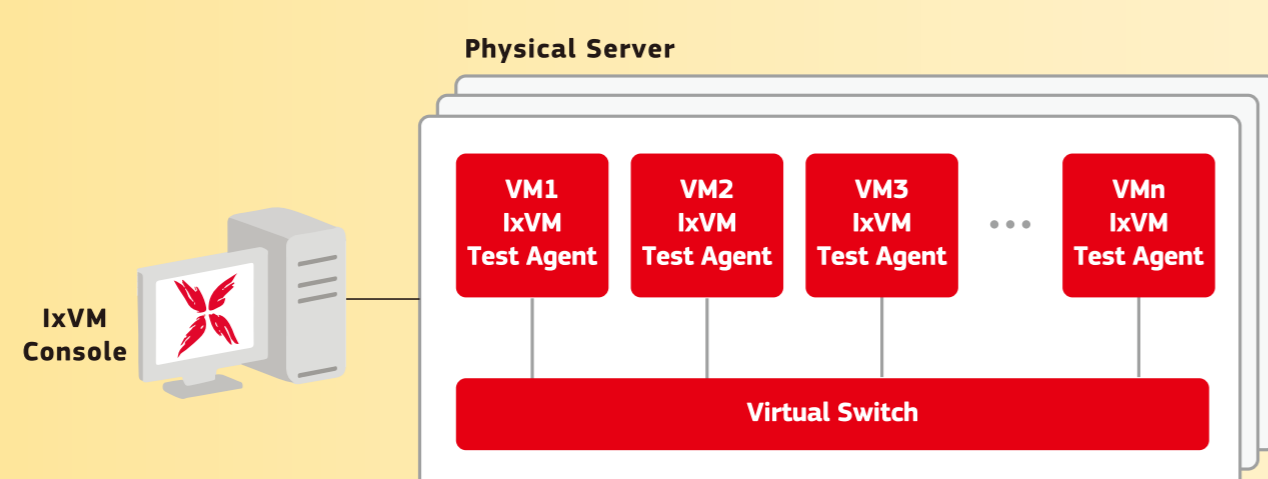

Visibility to SDN Control/Data Plane

OpenFlow Control Tower

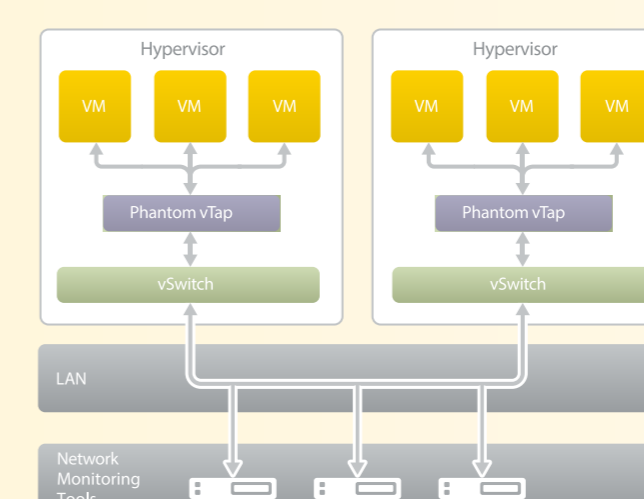

NFV: Network Function Virtualization

NFV Test Solution

IxVM

Visibility to Virtualized Environment

Ixia Phantom vTap
