

Hybrid Cloud causing a multitude of challenges

Infrastructure complexity leading to more application deployment gridlock

Lengthy time to market caused by impossible handover from Dev to Ops

Lack of Cloud-native skill
Reality is DevDev but far from DevOps

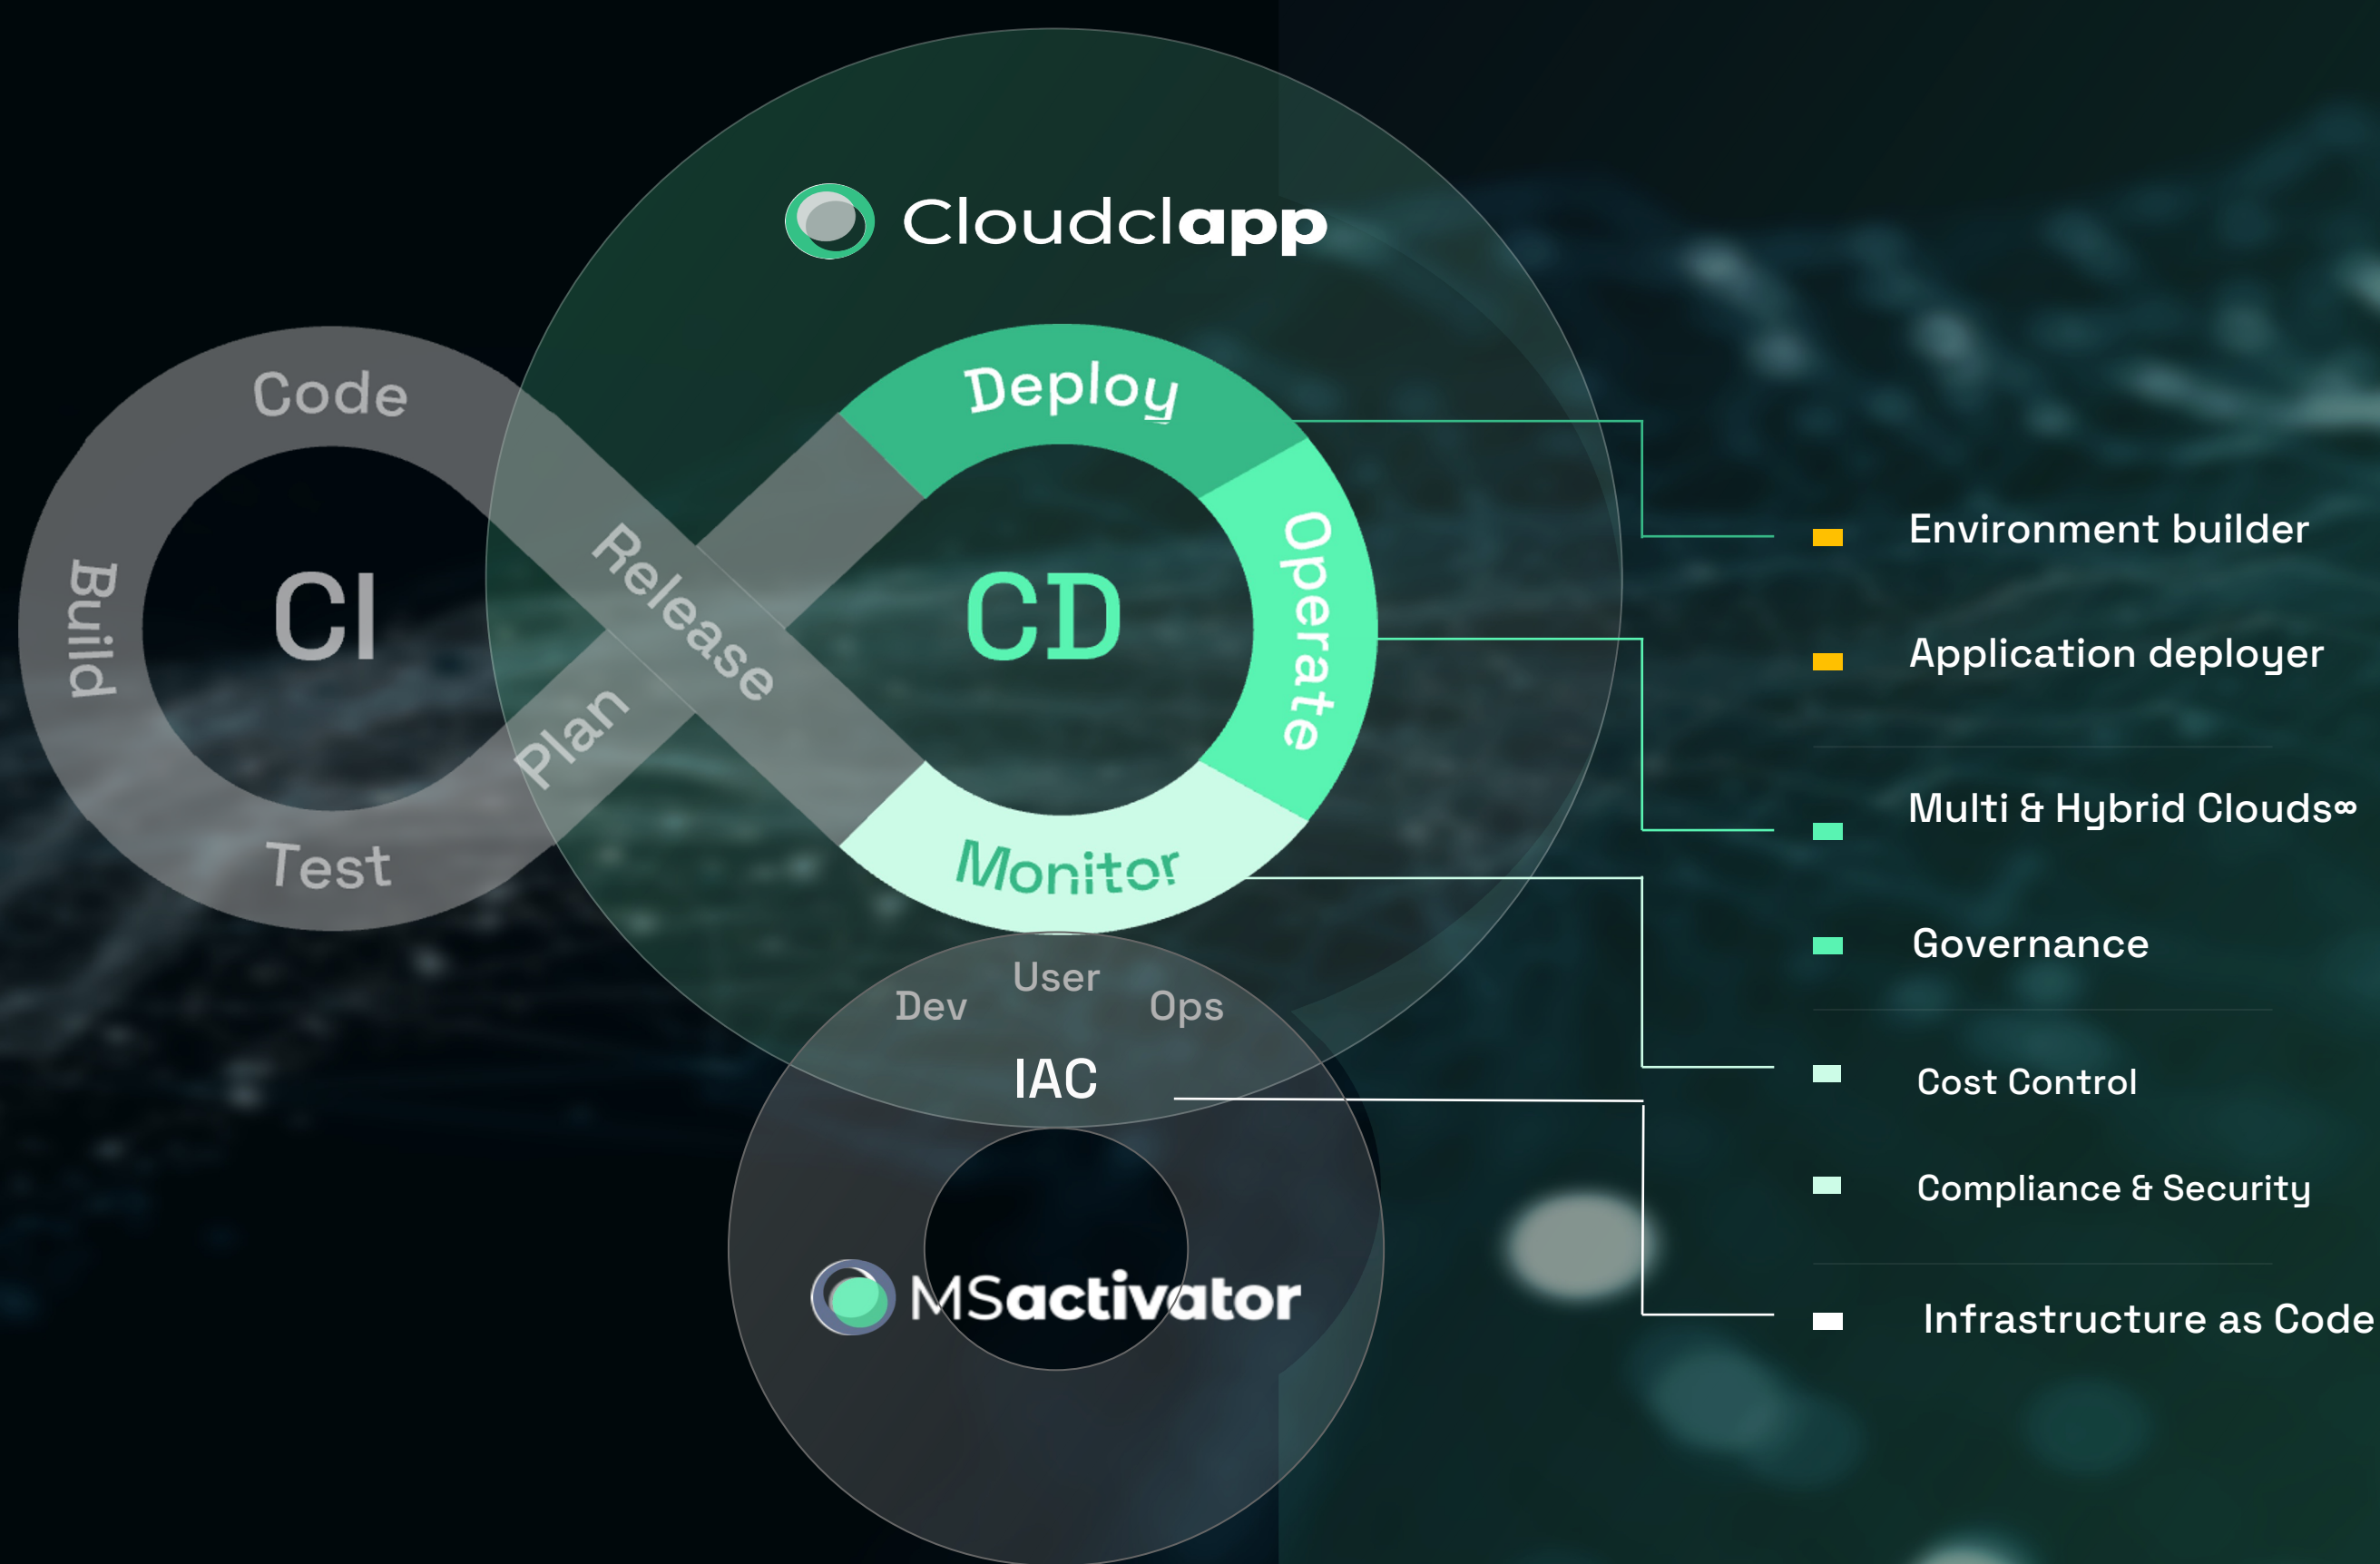

Risk vulnerabilities due to lack of container oversight.

Expenses run wild from low visibility into resource utilization

UBiqube delivers two frameworks to solve above challenges

Our positioning in the pipeline as

Continuous Deployment & Lifecycle management solution

Cloudclapp gears devops teams for Hybrid Cloud strategies

MSActivator : IT Infrastructure Automation made Simple

Automation for All

MSActivator is an Integrated Automation Platform (IAP) focused on the experience simplification (UX and DX) for both the Developers & the Operations manager of any IT/Cloud/Network/Edge infrastructure

It reinvents the Automation DX (dev experience) through
 Abstraction driven Simplicity
 Automation Scalability Paradox

Smart world makes infrastructure complex Simplicity in Integration and Operation is the key

Why MSActivator?

Full ETSI MANO compliancy

Beyond MANO requirements, MSActivator added:

A full Cloud assurance suite
 Converged Configuration change management for both VNF (CNF) and PNF

Cloud native by design making it easier to scale with load

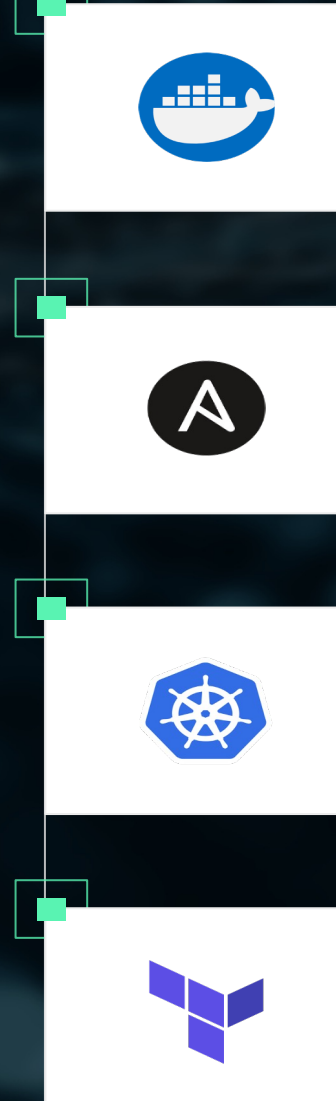

Active Disaster recovery capability

Support for both VM and Cloud native VNF

Support for multiple VIMs

Stage set for future 'No code orchestration'

Devops ready by design (CI/CD integration for an evergreen adjustments)

Use Cases by Sector

TELCO

- Telco Cloud CNF/VNF orchestration
- Core Routers Configuration Migration
- Bandwidth on demand
- Legacy CPE lifecycle management
- Multivendor SDWAN
- Security
- Private 5G

ENTERPRISE

- DC Network Infrastructure Management
- Managed Cloud security services
- MEC as a service
- Secure access and VPN
